

<u>Curriculum Intent</u>	<u>Curriculum Implementation</u>	<u>Curriculum Impact</u>
<p>To develop student’s computing skills over a number of different areas including Information Technology, Computing and Digital Lifestyles.</p> <p>The skills also include learning how to use a large range of Microsoft products.</p> <p>To develop student’s knowledge of how PCs and peripherals work.</p> <p>Finally, students research and learn about the many online dangers that they will face and come across in the real world.</p>	<p>The curriculum runs over three years and students study a range of topics. In year 7 there is a heavy focus on Microsoft products including Word, PowerPoint, Publisher and Excel. In all years’ students study e-safety topics which include personal information, sexting, catfish, screen free, cyberbullying and the negative effects of social media. Students all have the chance to become proficient in using a number of other software packages for video and photo editing, website creation, logical thinking and programming.</p>	<p>Students will develop skills that will prepare them the world of work including an excellent knowledge of how to use Microsoft products. Students will also have a sense of critical thinking and strategic planning as the curriculum focuses on basic programming. Finally, students will have the skills to stay safe in the on line world and will be knowledge about the dangers of catfish, strangers on line and sharing digital content.</p>
